Matchday (club match-day management)

The idea comes from my personal experience as a table tennis player for Alemannia Aachen

Workflow

Once the season schedule is published, each player submits their availability for the upcoming matches. Based on these responses, the system proposes a line-up, which the captain reviews and confirms for each match. After the match is played, a team member enters the result, and the opposing team then confirms it. If the two teams disagree, a dispute process is started and runs until the result is settled. Once the result is confirmed, the match report is published and the rankings are updated.

Services

Player availability, Lineup, Match result, Ranking, Notification, Hall booking.

Human tasks

Players submit availabilities, captain approves the line-up, teams confirm the result.

LLM

Generates the match report from the result data, recommends the line-up for the next match based on players' performance or parses team chat availability replies into structured data.
