Software Architecture (WS 26/27)
Assignment 3

Prof. Dr.-Ing. Ronny Seiger (ronny.seiger@rwth-aachen.de)
Tobias Arens (tobias.arens@rwth-aachen.de)

29.10.2026

Task 1: Event Storming

In the exercise session we will introduce the technique of *Event Storming*[1] to identify domains, sub-domains, events, aggregates, and other important DDD concepts.

Task: Conduct an event storming workshop for your project to get to know the domain and create a shared understanding of all concepts (ubiquitous language) and typical workflows. Persist the results in digital form (e.g., using a Miro[2] board). This board will become part of your final hand-in.

Task 2: Context Mapping

Task: Using the results of the event storming as basis, create a context map with bounded contexts and relationships between the bounded contexts (strategic DDD). Briefly explain your reasoning regarding the selection of bounded contexts and relationships for each context and relationship (max. 2 short sentences per context/relationship). The context map will become part of your final hand-in.
